INVESTOR CONFIDENCE INDEX DECLINES FROM 54.5 TO 48.0 IN DECEMBER

Boston, December 23, 2008 – State Street Global Markets, the investment research and trading arm of State Street Corporation (NYSE:STT), today released the results of the State Street Investor Confidence Index® for December 2008.

Global Investor Confidence decreased by 6.5 points to 48.0 from November's revised level of 54.5. Confidence among North American investors fell particularly sharply, from November's revised reading of 45.3 to 30.1. European investors were slightly less pessimistic, but their confidence still declined to 67.4 from a revised level of 72.5 in November. Institutional investors in Asia bucked the trend, as their confidence rose from 82.2 to 86.1.

Developed through State Street Global Markets' research partnership, State Street Associates, by Harvard University professor Ken Froot and State Street Associates Director Paul O'Connell, the State Street Investor Confidence Index measures investor confidence on a quantitative basis by analyzing the actual buying and selling patterns of institutional investors. The index is based on financial theory that assigns precise meaning to changes in investor risk appetite, or the willingness of investors to allocate their portfolios to equities. The more of their portfolio that institutional investors are willing to devote to equities, the greater their risk appetite or confidence.

"Having taken a pause in November, investor confidence resumed its sharp decline this month, and we witnessed some of the largest reallocations away from risky assets that we have recorded over the last decade," commented Froot. "The selling was relatively broad-based throughout the month, though it did abate in the final days before December 17th, the cutoff for this month's measurement sample. Institutions, it seems, continue to have some trepidation about whether recent policy moves will be enough to forestall deflation and a

pronounced economic slow-down in 2009.”

“Since October 31st, our quantitative measures show that institutional investors have been deleveraging roughly two out of every three days, with North American institutions leading the way,” added O’Connell. “The most recent decline in confidence is somewhat surprising, as it occurs against the backdrop of modest gains in equity prices over the period. This suggests that institutional investors may be on the side of providing liquidity to other market participants whose risk appetite has improved somewhat.”

December Results

Global	48.0
N. America	30.1
Europe	67.4
Asia-Pacific	86.1
